The fund mainly invests in financial instruments, in the Small & Midcap segment, listed on exchanges or other authorized trading bodies in Sweden, Norway, Finland, Denmark and Iceland.

The fund may invest in equities, fixed income instruments, derivatives and fund units as well as in cash held in an account with a credit institution. Investment decisions are based on own proprietary equity research focusing on stock picking, without any limitations to underlying industry sector exposure.

## What are the risks and what could I get in return?

### Risk indicator

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

We have classified this product as 5 out of 7, which is a medium-

high risk class.

This rates the potential losses from future performance at a medium-high level, and poor market conditions will likely impact our capacity to pay you.

**Be aware of currency risk.** You may receive payments in a currency that differs from your reference currency, so the final return you will get depends on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.

The fund is also exposed to the following materially relevant risks that are not included in the summary risk indicator:  
Nordic equity market risk Derivatives risk

This product does not include any protection from future market performance so you could lose some or all of your investment.

If we are not able to pay you what is owed, you could lose your entire investment.

## What are the costs?

The person advising on or selling you this product may charge you other costs. If so, this person will provide you with information about these costs and how they affect your investment.

### Costs over time

The tables show the amounts that are taken from your investment to cover different types of costs. These amounts depend on how much you invest, how long you hold the product and how well the product does. The amounts shown here are illustrations based on an example investment amount and different possible investment periods.

We have assumed:

- In the first year you would get back the amount that you invested (0% annual return). For the other holding period we have assumed the product performs as shown in the moderate scenario
- 100,000 SEK is invested

	If you exit after 1 year	If you exit after 3 years
<b>Total costs</b>	14,660 SEK	48,644 SEK
Annual cost impact (*)	14.7 %	11.5 % each year

(\*) This illustrates how costs reduce your return each year over the holding period. For example it shows that if you exit at the recommended holding period your average return per year is projected to be 24.5% before costs and 12.9% after costs.

We may share part of the costs with the person selling you the product to cover the services they provide to you. They will inform you of the amount.
