Risk and reward profile

What does this synthetic risk and reward indicator mean?

- The sub-fund is classified in category 6 because the value of the sub-fund may be subject to high variations and because of this the risk of loss and the potential of gain may be high.
- The risk category has been determined using the maximum risk limit allowed for this sub-fund. The risk category may not be a reliable indicator of the sub-fund's future risk profile. The risk category shown is not guaranteed and may change over time.
- The seven-category scale is complex, for example 2 is not twice as risky as 1. The gap between 1 and 2 might not be the same

as the gap between 5 and 6. A category 1 fund is not a risk-free investment - the risk of losing your money is small, but the chance of making gains is also limited.

Which materially relevant risks are not adequately captured by the synthetic indicator?

The fund's main focus is investments in Nordic equities and equity related instruments. These markets are generally characterized by high risks, but also by potentially high returns. The fund actively balances this by utilizing its possibilities to sell short and to execute derivative strategies within its investment mandate. This is to reduce the level of risk (measured as the standard deviation in the Fund's returns) to a level which is below the risks of the underlying equity markets.

How can I get more information about the risks of the sub-fund?

- Additional information concerning the risks of investment is indicated in the corresponding sections of the prospectus of the fund.
